

PRESS RELEASE

InfoWave to distribute and sell GLOWCARD™

*This device which sets a new benchmark in temperature sensing
has received encouraging responses globally*

SINGAPORE, 30 June 2003 – InfoWave Pte Ltd (“InfoWave” or “the Company”), an associate company of Singapore Technologies Electronics Limited (“ST Elect”) jointly with ST Elect today launched the latest prototype of the GLOWCARD™ (“GlowCard”). ST Elect will be responsible for the design and production of the GlowCard and InfoWave will be responsible for the marketing and distribution of this new device.

The GlowCard is the latest temperature-sensing device that retains and displays the temperature reading. It brings the temperature sensing function closer to the individual level. The debut of the GlowCard has been planned for Singapore’s forthcoming 38th National Day on 9 August 2003.

InfoWave was established in August 2002 as a mobile and wireless information devices company. The Company is 43% owned by ST Elect, the leading electronics system solutions provider in the region, and 25% owned by mainboard listed engineering solutions provider, Trek 2000 International Ltd. Riding on its wide network of distribution channels in the local and global markets, InfoWave is well positioned to bring the GlowCard to consumers around the world.

This latest device is specially designed to bring convenience to users who can carry them as part of their personal items. Through the GlowCard, Singapore has not only developed yet another breakthrough in the world of bio-medical electronics products, more importantly, the GlowCard has set another new benchmark in temperature taking – using the forehead temperature as an indicator of the temperature of the person. This practice adapts the traditional method of temperature taking where the forehead is used as an indicator of a person’s temperature. This practice has been adapted into the GlowCard and its accuracy improved through the use of technology. Another interesting feature of the GlowCard is its non intrusive and a relatively more hygienic practice for measuring temperature.

The patent for the GlowCard has been filed to protect its intellectual property ownership.

Commenting on this latest benchmark set by the GlowCard, Mr Seah Moon Ming, Chairman of InfoWave says, “the DSTA’s (Defence Science Technology Agency) Defence Medical Research Institute has assisted us in an intensive study and tests on forehead temperature, relating forehead temperatures to fever indication. The functioning of the GlowCard is based on this research to sense feverish indications in individuals.”

“What you see today is only the tip of the iceberg. The GlowCard offers many other potential as it can be adapted to include more functions to be incorporated for use in our daily lives. For example, a smart card, an access card, badges, physical exercise machines and the list goes on.” Mr Seah added.

InfoWave has received encouraging response from the many corporations in Singapore and around the region for the GlowCards. Enquiries have come in from the airline industry, healthcare, education, hospitality and many others in Singapore and around the region.

About InfoWave Pte Ltd

InfoWave is a joint-venture between CET Technologies, Trek 2000 and Melodeon. InfoWave aims to be the leading provider in the design and supply of mobile and wireless information devices, focusing on Telematics and Bio-Medical Electronics. Headquartered in Singapore, InfoWave’s global market channels include US, Europe, Middle-East and Asia-Pacific. InfoWave’s Waveon™ telematics product range includes ruggedised handheld PDAs, in-vehicle terminals and industrial grade PC Tablets. Its Waveon 700 series in-vehicle terminals are recognised as a leading player in the global transportation market. The GlowCard is the first of the series of innovative bio-medical electronics product that the company is involved in developing. InfoWave started operations in August 2002 and is headquartered in Singapore. For more information about InfoWave please visit www.InfowaveMobile.com.
