

FOR IMMEDIATE RELEASE

DigiSAFE presents the Infocomm Security Showcase at iX 2003,
(01 – 03 October 2003)

Singapore, 30 September 2003 – DigiSAFE Pte Ltd (“DigiSAFE”) has brought together ten local Infocomm Security companies to present a first-of-its-kind Infocomm Security Pavilion aptly named “Made-In-Singapore and Proud of IT!” This will be showcased at the upcoming iX2003 exhibition to be held at Singapore Expo Hall 3, Booth 3G4-1, from 10.00am – 6.00pm daily.

Together with our co-exhibitors, the showcase aims to promote a variety of complementary “Made-In-Singapore” products and services that demonstrate Singapore’s leading-edge technologies and capabilities in the Infocomm Security industry.

CE-Infosys

CompuSec, the all-in-one security solution provides a full range of features to completely secure your Desktop or Notebook. CompuSec can be deployed for single users or for a large group (with central administration). CompuSec even has a software version free for download at www.ce-infosys.com.

DataMark Technologies

Digital Image Security Solution – StegMark, a digital watermarking solution that imprints ownership rights and ensures authenticity of digital content such as digital photographs, video and documents.

Data Security Systems Solutions

Presenting the DSSS Authentication Server solution for all Internet / Remote authentication needs. Besides standard features such as end-to-end security and token authentication, it provides a breakthrough in authentication technology by allowing organizations to migrate,

at their own pace, from UserID-Password to stronger 2-factor mechanisms in a zero-risk and seamless manner.

Maximus Consulting

Maximus presents patented security risk assessment tool, Maximus SRC, and multi-purpose crypto-enabled appliance, Trustpoint BASE. Maximus is one of the world's most advanced management solutions that is derived from BS7799/ISO17799 SMS framework. Trustpoint BASE is a compact appliance that allows security services to be deployed in hardware within a short timeframe.

Mykenae

Mykenae will be launching its new Web security and performance solutions -- Mykenae MCC and Mykenae SAP -- at iX2003. These solutions are designed to help enterprises deliver better Internet access experience to users while providing a secure virtual workplace.

Netrust

Netrust Professional Services arm will be showcasing its latest product suite that allows content owners to make available, information via the Web and other common media securely, without losing control of its distribution. It functions by incorporating encryption and disabling copy, save and print features.

RadianTrust

RadianTrust's digital watermarking technology is designed to help businesses leverage on the Internet for secure distribution of controlled documents. It uses optical watermarks to enable visual document authentication and prevent unauthorized reproduction of the document once it is printed on regular paper via standard laser printers.

Sensecurity Institute

Sensecurity Institute Security Practitioner (SISP) certification is Singapore's first internationally recognized IT Security certification - accredited by the US based Association of Internet Professionals (AIP) Certification Accreditation Council (ACAC) and the National Infocomm Competency Centre (NICC).

TrustAsia

TrustAsia, an affiliate of VeriSign in Southeast Asia, is a leading digital trust services provider that helps businesses and consumers establish an Internet presence while safeguarding its online transactions and communications.

About DigiSAFE

DigiSAFE is a leading infocomm security company based in Singapore with 50 employees. DigiSAFE designs, develops and manufactures cryptographic based hardware and security software for the protection of data, voice, fax and multimedia across the communication channels and internet, and to provide high-assurance security needs. Founded in 1999, DigiSAFE has well-proven track records with major project implementations in Government agencies and commercial enterprises.

DigiSAFE is wholly owned by CET Technologies Pte Ltd ("CET"), a subsidiary of Singapore Technologies Electronics Limited.
